## THDC and NEEPCO: Value-accretive hydro-power M&As

India Equity Research | Power

We reckon NTPC's acquisition of the Government of India's stakes in THDC and NEEPCO for INR115bn is 3% EPS-accretive. They are also neat strategic fits in NTPC's renewable aspirations. In our view: i) the acquisitions provide NTPC a toehold in renewables with 5GW of capacity (3GW operational), thereby skirting low-RoE solar/wind capex; ii) THDC's RoE profile is robust, but NEEPCO's is sub-par and needs a turnaround (ample scope to soup up operational and financial efficiencies worth INR7bn); iii) NTPC's D/E remains robust at less than 1.5x post-acquisition; and iv) the acquisitions at INR115bn are 10% costlier than our expectation, but still value-accretive. NTPC is back on the growth trajectory (17% EPS growth in FY20), and this should sustain. With no more divestment risks overhanging the company and the stock's attractive valuation, we retain 'BUY' on NTPC— top pick.

### Beneficial acquisition; focus on raising efficiency/profitability

NTPC announced the acquisition of GoI's 100% stake in two power companies—THDC (GoI holding 75%) and NEEPCO (100% GoI holding) for INR75bn and INR40bn, respectively. The approved regulated equity is about INR62bn for both companies, and INR25bn is likely to be added over the next six months upon commercialisation of capacity aggregating 600MW. We observe THDC's returns profile passes muster (superior regulated RoE of 20%-plus), but NEEPCO's operating performance needs a leg-up given its lacklustre RoE of 8%. Taking a cue from NTPC's superior returns in Koldam, it can squeeze out maximum benefit from both via cost/debt-optimisation.

### Deal EPS-accretive right away

At a combined valuation of INR115bn, the deal is 3% EPS-accretive on FY21 earnings (without taking into account any synergies). The valuation on FY19 P/BV at 0.9x looks a tad expensive, but there is great scope to soup-up earnings over the next two years by: i) reducing PAF-based under-recoveries worth INR2bn at NEEPCO; ii) controlling high O&M charges and slashing them by INR3bn at THDC/NEEPCO; iii) interest cost savings of INR1bn post sharing benefits; and iv) releasing INR15bn worth of working capital.

### Outlook and valuation: Set for growth; maintain 'BUY'

We see the two acquisitions as strategic fits to NTPC's big renewable aspirations. Taking a long-term view stretching to FY23/24, NTPC can add INR16bn-plus to its earnings (15% RoE), which is significantly IRR/ROE-accretive. NTPC is trading at an attractive P/BV and P/E of 0.7x /6x FY21E; retain 'BUY/SO' with a TP of INR145.

### Company Description

NTPC, set up in 1975, is India's largest power generation company with 53.6GW installed capacity (including 7GW from JVs). With 21GW of under construction projects, NTPC is looking to commercialize 4-5GW of capacity each year for the next two years. In near term NTPC is committed to set up 10GW renewable portfolio by 2022. Over the long term NTPC plans to expand its generation portfolio to 130GW by 2032 with 30% of the basket from non-fossil fuel based capacity. Further NTPC has forayed into coal mining operations with multiple mines under various phases of development.

### Investment Theme

Regulated returns: NTPC currently has ~45GW of operational capacity (standalone) under the regulated model with pipeline capacity of ~30-35GW plus signed under the regulated model. This enables it to pass on increase in costs, limiting the impact on profitability.

- High efficiency gains: While the current regulation permits post tax RoE of 15.5% (along with PAF based incentive), on regulated equity the company has been able to earn RoE of ~19-20% on the regulated book due to highly efficient plants and economies of scale.
- Inorganic growth opportunities: Ensuing consolidation in thermal space at attractive valuations provides growth opportunities for NTPC given its scale and PPA pipeline in PPA.
- Fuel security: The company has secured fuel supplies through FSAs with CIL in the past; incrementally, the coal blocks being developed should improve NTPC's fuel security.

### Key Risks

Delay in execution of capex: Any delay in execution of pipeline projects could result in downside from the estimated earnings/valuations.

- SEB delays: While NTPC makes due efforts to maintain adequate LCs for sale of power to SEBs, failure to secure timely payments is a risk to the working capital cycle and hence earnings.
- Fuel supplies: Fuel non-availability could impact PLF's/PAF's resulting into higher than estimated fixed cost under-recoveries impacting RoE's.
